

GitHub step-by-step guide

How to create new files in your local repo

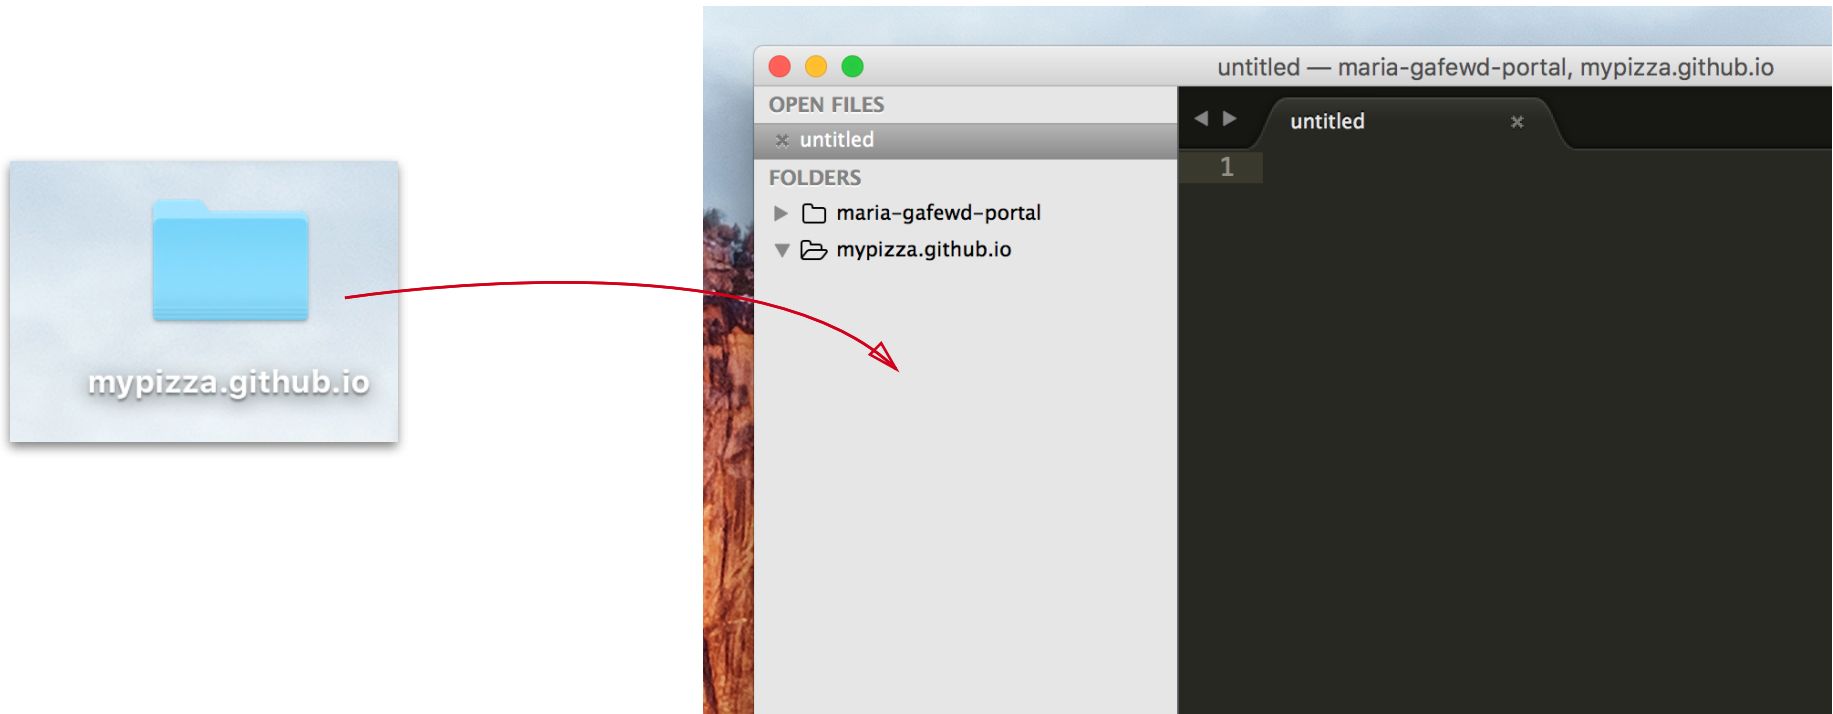

1. Launch Sublime Text

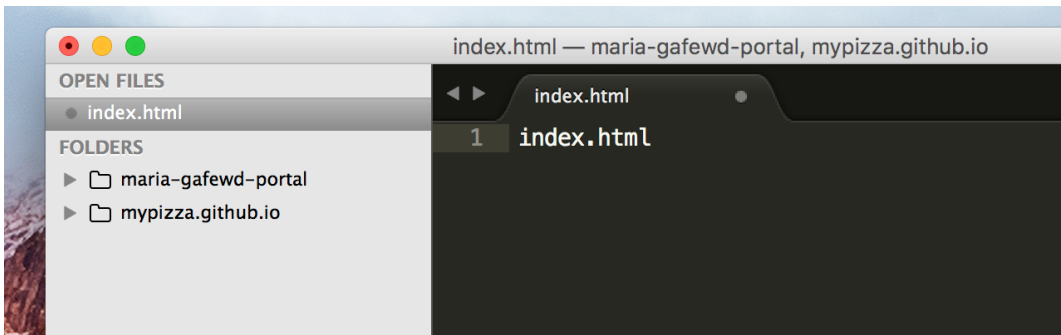

2. If your sidebar is hidden, go to View > Side Bar > Show Side Bar

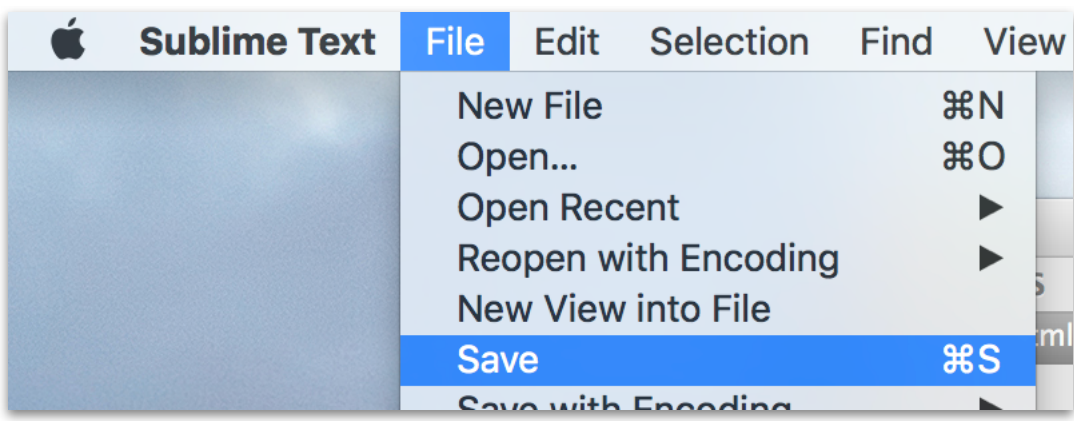

3. Drag your repo folder into the Sublime Text sidebar, and it will show up under FOLDERS

4. To create a new file, type the file name in a blank file, for example index.html

5. To save the file, go to File > Save

6. Save the file in the repo (folder)

7. You'll see that the new index.html file is now INSIDE the repo directory
